Terms and Rights

Thank you for your purchase.

These are your rights to this package.

- [Yes] For Personal Use Only.
- [Yes] May be used on as many WordPress blogs or websites as you own.
- [No] May not be used on client sites.
- [No] May not be used when blog or website flipping.
- [No] Resale Rights.
- [No] Master Resale Rights.
- [No] Private Label Rights.

Introduction

What You Get

The idea behind Content Spinner Wiz is that not only do you get a plugin that will spin articles for your own personal or business use, but you can also set it up as a service for people who subscribe to your mailing lists.

The extra nice thing about it is that you can see what articles are submitted by users into the plugin, and also download the spun articles yourself. You don't have to do this, but it's an option you can choose to exercise if you wish.

We think the ways that you can use this latest addition to our Wizard Plugin product line might truly amaze you!

Installing

Simply upload the plugin zip using the WP admin panel browser uploader and activate.

Alternatively

1. Unzip and save the extracted folder somewhere you can find it.
2. Use your FTP client (like FileZilla) to upload the folder to your /wp-content/plugins/ directory on your WordPress blog or website.
3. Login to your WordPress admin page and activate.

Upgrading

1. First BACK UP YOUR WORDPRESS DATABASE! We won't take any responsibility for your data, you have to look after it yourself.
2. Deactivate the existing version of the plugin.
3. Use your FTP client to delete the existing plugin.
4. Unzip the new version and save the extracted folder somewhere you can find it.
5. Use your FTP client to upload the newly extracted folder to your /wp-content/plugins/ directory on your WordPress blog or website OR use the new plugin uploader to install the upgrade.
6. Reactivate the plugin.

Trouble Shooting

If your blog or website displays with an error message when you activate the plugin or otherwise adversely affects your blog or website, then the first thing you should do is delete the plugin with your FTP client or using the delete function on the plugins page, and your blog or website will be restored to normal.

Usage

Setting Up The Article Spinner

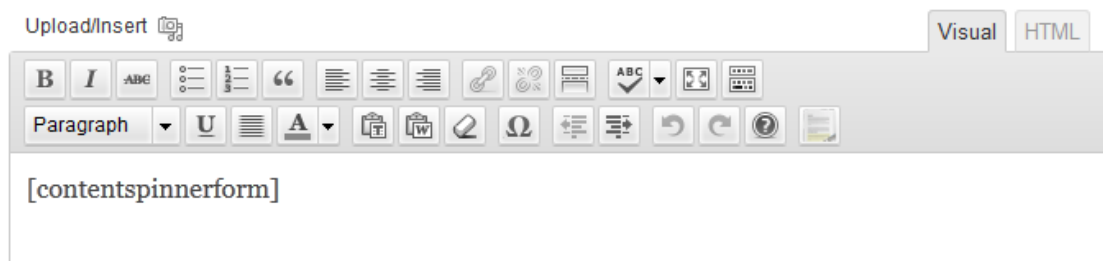

After installation you'll see a new menu item in your admin panel.

First click on "Content Spinner Wiz" to edit the plugin settings.

A screenshot of the 'Content Spinner Wiz' settings page. The page has a title 'Settings' with a wrench and screwdriver icon. It contains several settings: 'Form Label - Limit Output' with a text input 'Limit Output'; 'Form Label - Articles' with a text input 'Article'; 'File - Prefix' with a text input 'articles'; 'System - Save Spinned Articles' with a checked checkbox; 'System - Max Output' with a text input '5000'; and 'System - Delete Zip Files' with a dropdown menu set to 'After an hour'. There is an 'Update' button at the bottom. Three yellow callout boxes provide instructions: the first points to the 'Form Label' fields, stating they are labels for the front of the blog; the second points to the 'File - Prefix' field, stating it's the prefix for all article filenames; the third points to the 'System' settings, listing three steps: #1 - Check the box to enable saving articles; #2 - Set the maximum amount of articles output to avoid server overload; #3 - Set the period of time to auto-delete the articles. A note at the bottom states: '* to display the content-spinner form on your page/post use this shortcode [contentspinnerform]'. A final callout box at the bottom right says: 'A reminder of the shortcode to use on a page on your site to display the article spinner form.'

Finally, create a new page or post on your blog and paste the article spinner shortcode [contentspinnerform] into it and publish.

Using The Article Spinner

On the front of your blog, go to the page or post you just published and you should see the article spinner form:

The screenshot shows the 'Article Spinner' interface. It includes a 'Limit Output' field set to '5', an 'Article' input box containing the text 'The {{cat|dog|mouse}}|horse} sat {on the mat|by the door|on the table}.' and a 'Start Spinning!' button. Two yellow callout boxes provide instructions: one explains that the limit can be overridden in the admin panel, and the other explains the spinner format with curly braces and vertical bars, providing an example of the input text.

The user of the article spinner can then paste their spun format article into the article box using the conventional spinner format of curly braces with a vertical bar separating the variants. { | }

Example:

The {{cat|dog|mouse}}|horse} sat {on the mat|by the door|on the table}.

Would generate (amongst others) the following spun sentences:

The horse sat on the table.

The horse sat on the mat.

The horse sat by the door.

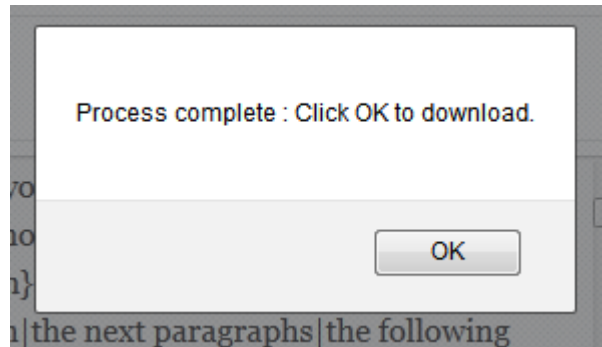

The cat sat on the mat.

The mouse sat on the table.

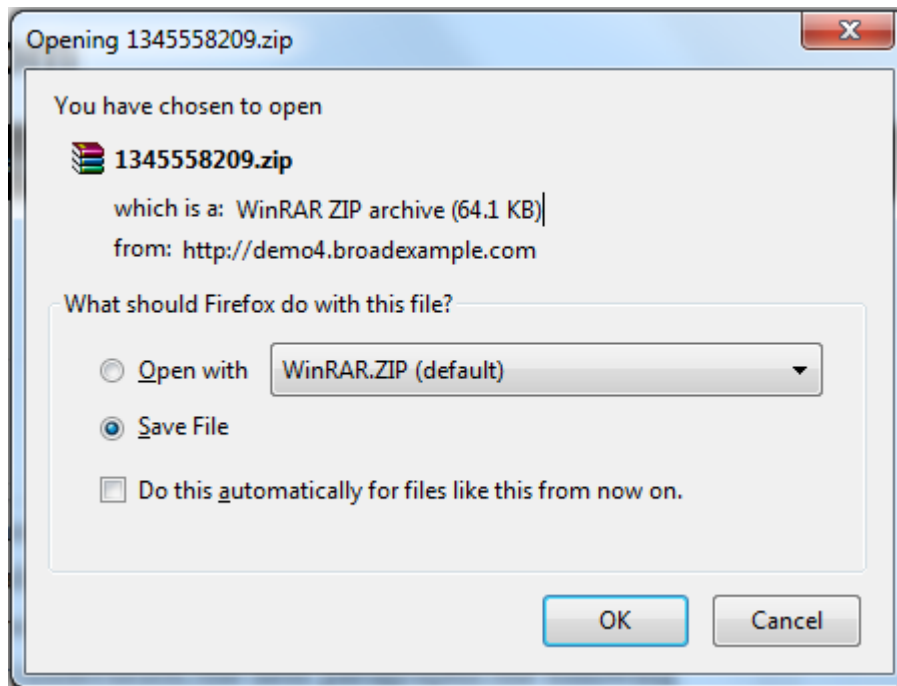

Note that in the above example output the word "horse" crops up more than the other animals because of the nested cat/dog/mouse variable - it's always 50-50 as to whether the spinner selects "cat"/"dog"/"mouse" OR "horse".

With multiple choices of words, phrases and sentences making up an article, you'll end up with hundreds or thousands of different articles depending on the amount of choice (i.e. work) you put into it. It's still a lot faster than writing all the articles individually.

When the user clicks the "Start Spinning!" button, then the articles are generated and a dialogue box pops open to confirm completion.

When the user clicks "OK" the zipped articles download.

Inside the zip are all the individual articles held within text files.

Viewing Generated Articles

Inside the admin panel if you go to the "Saved Articles" menu option (and if you enabled the saving of articles in the plugin settings) you'll see a list of the articles.

Articles						
ID	Original Text	Results	Processing Time (sec)	Requested By	Date Requested	Action
2	The {{cat dog mouse}}horse} sat {on the mat by the..	5 Results(s)	0.041sec(s)	94.169.49.135	August 26 2012 09:37:22 am	Download Results
1	The {{cat dog mouse}}horse} sat {on the mat by the..	5 Results(s)	0.0354sec(s)	94.169.49.135	August 25 2012 05:02:04 pm	Download Results

The first few words of the original spin-ready article. Clicking this will reveal the whole spun format article at the bottom of this page.

The number of requested (or system limited) results.

The IP address of the requester, and date and time requested.

You can view the whole of the original spin-ready article by clicking the "Original Text" and it will display at the bottom of the page. Clicking the number of results will display all the spun articles.

Finally, clicking the "Download Results" link will download all the generated articles in a zip file.

N.B. All of the zipped articles are stored in this location on your WordPress installation:

/wp-content/uploads/pgsc_tempfiles/

If you have a lot to download then you could connect to your site by FTP and download them that way.

Conclusion

Once you try out Content Spinner Wiz WordPress plugin we know you'll come to rely on it a lot, and recommend it to your friends and colleagues too. With our line of Wizard plugins we're doing our very best to increase your productivity and enhance your marketing performance.

With our continually growing line of products like **Content Spinner Wiz**, I have more and more time to spend with my family and friends, but I don't sacrifice on the quality of work I invest into my business either. Time is our most precious commodity, and ANYTHING that we can do to stretch our limited time and efforts out to be more effective is a SUPER VALUE to all of us!

To your success,

Chris Jenkins

Resources

Namecheap.com
